

Jeff Martin, ASHM

Low Voltage Technician

CENTs Low Voltage

I am a low voltage electrician in a company I am passionate about, we are changing the face of communication one step at a time, bring the world into the next generation, but the road to getting here was long and interesting.

At the age of 18, directly after high school, I enlisted in the Marine Corps to be a helicopter mechanic, and that job took me to many different countries around the world and taught me so many different skills. I stayed with that job for more than 20 years, to the point where my family had to let me know that they were tired of moving, so I began the process of obtaining my college education.

I attended Embry-Riddle Aeronautical University while maintaining my day job as a mechanic and Ground Safety Officer for my command. I fell in love with the safety job and began working with the school to switch my major from Aviation Mechanics to Safety Management. Along the way to obtaining my Safety Management degree, I obtained my A.S. in Aeronautics and began the process of retiring from the Marine Corps.

The Summer of 2023 was the scariest and most exciting time of my life, I retired from the Marine Corps on June 16th, watched my oldest Son depart on his military journey with the AirForce on June 20th, and started my current job on July 17th. Just about a week after starting my new job, I finished my B.S. in Safety Management and could begin the process of officially ensuring safety on the job site every day. Throughout my journey, there has always been an emphasis on certification and qualifications, they not only prove that you can accomplish the mission, but they also give credibility to the information that you are spreading. Over my years in the Marine Corps, I have held many different qualifications in the aviation industry from Plane Captain to Safe for Flight, and as I transitioned to the civilian sector, I wanted to allow myself the same proof source of my expertise in the field. I started with the Student Associate Safety and Health Manager certification while in school (and quickly added it to me email signature) and after graduation I was granted the Associate Safety and Health Manager credential, which I now hold along with the Board of Certified Safety Professionals, Graduate Safety Practitioner credential.

I now enjoy the Florida weather, working in the Tech industry, with a passion for safety with my wife Ashley, and our two youngest Children.
